Insights & Recommendations

1 - February recorded a **8.1%** decline in total sales compared with January, largely explained by **8.3%** less order, primarily due to having **9.7%** lesser calendar days compared to January. Despite the lower monthly sales, February achieved **1.7%** higher average daily sales and **1.6%** higher average daily order volume compared to January, while Febraury has also shown a very small Increase in AOV. If February had the same number of days as January than it would have even recorded **1.7%** higher in total monthly revenue compared to January. This indicates that underlying daily sales performance remained healthy and the monthly decline does not necessarily represent a deterioration in business performance.

Recommendation : Evaluate monthly performance using normalized metrics such as average daily sales and average daily orders alongside total monthly sales, particularly when comparing months with different numbers of days.

2 - Veg food contributes **66%** of total revenue, representing that vegiterian offerings represent the largest revenue in the dataset.

Recommendation : The business could prioritize high-performing vegetarian offerings and evaluate opportunities to expand or promote this segment.

3 - Karnataka generated the highest sales at **₹5.46M**, supported primarily by **97%** higher order volume than the second highest revenue generator state Uttar Pradesh. It recorded approximately twice as many orders as Uttar Pradesh, despite having a **11%** lower AOV compared with Uttar Pradesh. This indicates that Karnataka's revenue leadership is primarily volume-driven.
